It can be transposed to any key, or any temperament. It contains lots of rich chords in all the common inversions and voicing permutations, and includes some virtuoso material. It uses a hybrid scale consisting of 2 sub-scales, 2 major and 2 minor, each

with a different key and based on the root of the scale (e.g. G Major has 2 minor scales, G Major to C and G Major to B), each in a different pitch direction. Each scale contains a major chord and 2 minor chords, with the triads inverted (for example, G Major contains Gm7, Abm7 and E7), and it is these triads which form the basis of the notation. The entire scale is played 2 octaves in length, but I strongly recommend practice with only half of the scale - this is a far more useful exercise.
